John F. Doe

Web Developer

Calabasas, CA | 555-555-5555 | john@johndoe.com

Summary

Dynamic Web Developer and catalyst for positive change with a strong track record of delivering web applications that drive business value. Committed to supporting the needs of my immediate team while transforming business objectives into polished, functional, user-centric web applications.

Tools

JavaScript, Typescript, HTML5, CSS3, SQL, DBML, React.js, Node.js, Express.js, Next.js, jQuery, Jest, React Redux, Zustand, Immer, React Testing Library, Tailwind CSS, SASS, React Hooks, AJAX, JSON, REST API, ORM, PostgreSQL, TDD, Unit Testing, NPM, AWS, Git, SemVer, VS Code, Docker, Linux, ESLint, Prettier, Pa11y

Education

Texas A&M University: Computer Science   2017

Experience

Web Developer - Mom & Dad's Biz   2021 – 2024

- Contributed key front-end development efforts to multidisciplinary teams tasked with the development of web applications in a remote and Agile / Scrum environment
- Engaged with business stakeholders to elicit and refine requirements, provide feasibility assessments, strategically plan sprints, and lay out development roadmaps
- Developed and enforced front-end code quality standards and best practices, including code reviews to create high-quality and maintainable codebases
- Led the evaluation and selection of new development tools, carefully assessing needs, potential risks, and long-term return on investment
- Mentored junior front end developers to help them achieve goals and maximize performance through a blend of code review, paired programming, informal discussions, and resource sharing

Web Developer - Jim's Agency   2019 – 2021

- Collaborated closely with marketing and business teams to deliver software products that align with strategic goals and drive measurable business value
- Transformed mockups into pixel-perfect UI components, layouts, and applications that are aesthetically pleasing, robust, and meet functional business requirements
- Led the development and maintenance of a comprehensive suite of UI libraries, accelerating the software development lifecycle and enhancing user experience
- Contributed to the evaluation, selection, and implementation of a feature flagging platform that helped to streamline the CI/CD pipeline and accelerate feature deployment.
- Spearheaded the "A11y Initiative," focused on upgrading Insight's global web properties to meet WCAG 2.0 AA accessibility standards
- Developed high-performance applications to replace internal business legacy applications that were experiencing a high rate of failure
- Authored comprehensive documentation for codebases ensuring clarity and maintainability for development teams and stakeholders

Web Developer - Tomorrowland   2018 – 2019

- Developed responsive and user-friendly web applications using the Amex design system
- Maintained existing legacy applications (Java/XML), troubleshooting issues as they occurred
- Applied Behavior-Driven Development (BDD) practices to achieve 100% code coverage, ensuring thorough test scenarios and alignment with functional specifications

Web Development Instructor - Cozy Community College   2018 – 2020

- Delivered comprehensive web development curricula, covering front-end and technologies to equip students with industry-relevant skills
- Implemented and assessed assessments, projects, and exams to evaluate student progress and ensure mastery of web development concepts
- Assisted students in mastering web development concepts by providing one-on-one support and clarifying complex topics during tutoring sessions
- Monitored student progress, providing personalized feedback and mentorship to enhance performance and ensure successful course completion
